

1. Eeyore orders 6 tails from the shop every week - he has a store of extra ones because he loses his tail so often! If he orders from 24 weeks, and loses none, how many tails will he have?

2. Winnie the Pooh loves honey - we all know that! However, the bees aren't too impressed with the amount of honey he eats. Every time he eats a pot of honey, Winnie the Pooh gets stung 82 times (his fur means these don't really hurt!). If he eats 9 pots of honey, how many stings will he get?

3. Piglet is gathering twigs, stones and leaves to build Eeyore a better shelter. He collects 432 twigs on Monday, 8972 twigs on Tuesday (this was a particularly productive day!) and 93 on Wednesday. How many twigs does he have altogether?

4. Kanga and Roo have 93 cookies. They want to share them equally between Rabbit, Piglet, Christopher Robin and themselves. How many whole cookies will they get each?

5. Owl knows lots of things. On one day, he read 7 books. On another day, he read 17 books. After the two days, how many books had a read? How many more books does he need to read to reach his target of reading 50 books in a week?
