

## UTW - Ice Experiment

Can you make some ice at home by putting some water in an ice tray/cup/pot or any sized container in the freezer over night?

Once you have your ice can you think about how you can melt it? What could you use?

If you don't have resources available at home please don't worry you could just discuss what you think you could use and record the comments on tapestry.

Can you watch this video of Olaf from Frozen and think about what would happen to Olaf in Summer? [FROZEN | "In Summer" Song - Olaf | Official](#)

We would love to see your learning on tapestry with pictures, videos or comments.

Challenge—Could you put ice in different rooms in your house? Does it melt quicker in one room compared to the other?

Could you put some ice inside and outside and see which one melts the quickest? Can you predict which one will melt the quickest?
